

PRE- ANESTHETIC SCREENING:

Optional Service at Additional Cost

The following tests and medications are **recommended by our doctors** before they perform any procedures involving anesthesia or surgeries. Please read over them carefully; if you have any questions, please ask for assistance.

**Blood Panel work- up: Complete blood count and Chemistry Profile:**

These tests are used to indicate any pre-existing conditions that involve the liver, kidneys, and blood. The test results will also provide a baseline should there be any medical issues in the future. The cost of this test is \$96.00.

\_\_\_\_\_ I decline the recommended blood testing for my pet.

\_\_\_\_\_ Yes, I would like the doctor to perform a blood panel.

**EKG: Electrocardiogram:**

This test provides additional information on the condition of the animal's heart that may not be detectable with a stethoscope alone. This gives your vet additional information on how well the heart will tolerate anesthesia. The cost of this test is \$33.00.

\_\_\_\_\_ I decline the recommended EKG.

\_\_\_\_\_ yes, I would like the doctor to perform an EKG.

**Antiemetics: Drugs to control nausea and vomiting:**

Anesthesia can often cause nausea and vomiting in pets. Vomiting during a procedure can lead to inhalation pneumonia. A pre-operative antiemetic medication can be administered to your pet to prevent vomiting and nausea that will also encourage your pet to recover faster after surgery. The cost of this medication is \$16.00.

\_\_\_\_\_ I decline the recommended antiemetic medication.

\_\_\_\_\_ yes, I would like the doctor to administer an antiemetic.

**Any time anesthesia is used; there are certain risks which could result in injury or death. These risks have been explained to me.**

**Signed** \_\_\_\_\_ **Date** \_\_\_\_\_

**Daytime phone number:**
